## EDUCATION

### Stevens Institute of Technology

Bachelor of Science in Computer Science

Hoboken, NJ

Expected graduation: May 2026

**Relevant Coursework:** Data Structures, Algorithms, Discrete Structures, Theory of Computation, Linear Algebra, Computer Architecture and Organization, Database Management Systems, Programming Languages, Systems Programming, Artificial Intelligence, Security, Privacy, and Society

## EXPERIENCE

### Machine Learning & Web Development Researcher

Sep 2024 – Aug 2024

Stevens ProOF Lab

Hoboken, NJ

- Determined accuracy of **DreamGuassian** by testing its model accuracy with custom images with Google Colab
- Researched with Professor Pochiraju on **Gaussian splatting and pruning methods** to improve the accuracy of 3D image generation
- Analyzed and compared point clouds with various visualization tools like Meshlab, identifying and addressing rendering issues to **enhance data reconstruction** and visualization accuracy
- Established a user administration application that enables dynamic alteration of admin access to internal processing tools
- Designed database management system tracking maintenance status of 18 3D printers decreasing repair time

### Software Engineering Fellowship

July 2024 – Sep 2024

Headstarter AI

Remote

- Developed 3 AI based web applications using Next.js and REST APIs, enhancing web development and AI integration skills
- Coached by Amazon, Bloomberg, Capitol One engineers on Agile methodologies, CI/CD, and software development practices

### Software Developer

Sep 2023 – May 2024

Stevens Blueprint

Hoboken, NJ

- Collaborated with team of **8** to develop **full stack** Mentor Mentee management web application for Asian American Dream
- Streamlined mentor and mentee sign ups by **30%** through developing interactive React.js user interface
- Enhanced team productivity with **Github actions**, automating code formatting and linting ensuring development standards

## PROJECTS

### PantryTracker | JavaScript, Firebase, Gemini API, Next.js

July 2024

- Developed **full stack** web application to manage pantry items and provide recipe recommendations based on user inventory
- Implemented CRUD functionality for tracking pantry items, allowing users to efficiently add, update, and delete items within an organized and intuitive table interface
- Integrated the Gemini API to dynamically suggest recipe ideas based on the current inventory of pantry items

### Polyglot - HackPrinceton | React, JavaScript, Ant-Design, MongoDB, FastAPI, Flask

March 2024

- Developed bilingual language learning platform for Cherokee and English, featuring authentic audio recordings and seamless translation integration
- Implemented user-friendly interface displaying **8 stories** with renderings of Cherokee characters with React and Ant-Design
- Designed a robust back end with MongoDB, **FastAPI**, and Python, including a CSV-based translation system and integration of Google Text-to-Speech API for voice-over features

### Capfinitly - SpartaHack9 | Python, Jupyter Notebook, Matplotlib, NumPy

Jan. 2024

- Formulated **backtest strategy** leveraging new US Automobile sales data as a market indicator to guide selling of stock
- Utilized **20 years of S&P 500 data** with \$100,000 investment as benchmark comparison to test strategy effectiveness
- Indicated when to **sell stock and buy treasury bonds** to cut losses and maximize profit

### Trivia | C

April 2024

- Created a multiplayer trivia game server, managing up to **3 simultaneous client connections**.
- Utilized programming techniques including **sockets, and file descriptor monitoring**
- Integrated features such as player name registration, real-time score updates, and end-game recognition with custom messages, leveraging socket programming to ensure **synchronized game progression across all clients**
- Implemented a client-server communication protocol to handle game states, player inputs, and scoring

## TECHNICAL SKILLS

**Languages:** Java, Python, C/C++, HTML/CSS, JavaScript, R, LaTeX, SQL

**Frameworks:** Flask, JUnit, Next.js, Bootstrap, Ant-Design, Auth0

**Developer Tools:** Git, VS Code, Eclipse, Jupyter Notebook, Google Colab, SQLAlchemy, SQLiteStudio, Firebase, Ubuntu

**Libraries:** React, Puppeteer, Matplotlib, NumPy, Pandas

**Concepts:** Database Management, Software Engineering

## LEADERSHIP

### Brotherhood Chair

April 2024 – Present

Muslim Student Association

Hoboken, NJ

- Organize and led weekly and monthly social events and activities for **50+** members to develop a sense of community
- Facilitate networking opportunities with industry and religious professionals to guide members in religious and career development
